

ABSTRACT

A hand-held hair dryer and holder assembly including a hand-held hair-dryer a holder, and a cord hanger connected to the holder. The holder is adapted for mounting to a supporting surface. The holder provides a location for storing the hand-held hair dryer when the hand-held hair dryer is not in operation. An electrical cord extends from the hand-held hair dryer. The cord is utilized to electrically connect the hand-held hair dryer to a power supply. The cord hanging member is adapted to support a portion of the cord when the hand-held hair dryer is not in operation. The cord hanging member being removably or integrally connected to the holder.
